

Production software where geospatial data, AI and automation meet.

We build and run our own products in production, and bring the same engineering discipline to yours: scoped in writing, delivered in milestones, handed over with documentation.

CORE CAPABILITIES

Geospatial & PropTech

Cadastral data, terrain and imagery turned into products: parcel data pipelines, map rendering and automated aerial video.

Enterprise AI integration

Multi-provider LLM systems, retrieval (RAG), multi-agent workflows and approval gates, with figures computed by code rather than generated.

Operations automation

Ordering, billing, e-invoicing and notification flows that run unattended and stop safely when something is wrong.

Digital platforms & marketplaces

Web and mobile platforms with payments, catalog integrations and the operations tooling behind them.

WHY TEAMS WORK WITH US

We operate our own production software.

The practices we offer are the ones we rely on every day.

Test-gated, reproducible engineering.

Nothing reaches production without automated tests and gates.

Written scope, milestones and handover.

Acceptance criteria are agreed before code is written.

Provider-independent architectures.

AI, data and infrastructure providers can be replaced without a rewrite.

COMPANY DATA

TRADE NAME	Zeren Technologies	TAX OFFICE	Edremit, Balıkesir
ACTIVITY	NACE 62.10 — computer programming activities	REGISTERED E-MAIL (KEP)	necatisezer.zeren@hs01.kep.tr
LOCATION	Edremit, Balıkesir, Türkiye (UTC+3)	LANGUAGES	English, Turkish

EmlakKlip

LIVE

Turns a land parcel into a cinematic aerial video in minutes: cadastral boundaries, real terrain, satellite imagery and AI narration, with ordering, payments and e-invoicing around it.

Live since October 2026 · 45 automated check commands · card payments and e-Arşiv invoicing in production

LLM Studio

RESEARCH & DEVELOPMENT

A local-first, multi-agent AI workbench: persona runtime, hybrid retrieval, multi-provider routing and approval gates. Used 0.25× the tokens of Hermes Agent on a 25-task benchmark.

0.25× the tokens of Hermes Agent on the same 25 tasks, 25/25 succeeded · 12,000+ automated tests

BiletStreet

LIVE

A ticket marketplace: Flutter mobile client, NestJS and PostgreSQL API, event-data integrations and marketplace payments.

Flutter and web clients on one API · three event data providers · staged marketplace payments

DELIVERY FRAMEWORK

01 **Discovery** Needs, risks and success criteria

02 **Scope document** In scope, out of scope, acceptance criteria

03 **Architecture plan** Diagrams, technology decisions, data flow

04 **Milestones** Deliverables, demo dates, payment schedule

05 **Build & test** Regular demos, automated tests, quality gates

06 **Acceptance** Acceptance tests and sign-off

07 **Handover** Source in your repository, documentation, runbooks

08 **Support** The maintenance model you choose

ENGAGEMENT AND CONTRACTING

Engagement models.

Discovery sprint (fixed fee), fixed-scope project, or long-term development with reserved monthly capacity.

Contracts.

Master services agreement and a statement of work per project; changes through written change requests.

Confidentiality.

Mutual NDA before project details are shared; English and Turkish templates, or yours.

Invoicing.

Electronic invoices (e-Arşiv / e-Fatura) issued in Türkiye. Tax details in proposals and contracts.
